Siradel and LS telcom announce partnership in the area of Mobile TV network design

Singapore - Communic Asia 2007, 18th of June 2007

On the occasion of Communic Asia, Singapore, 18th – 22nd of June 2007, Siradel and LS telcom announce a partnership agreement to increase accuracy of mobile coverage and reduce interference of Mobile TV networks.

Under the agreement LS telcom, a leader for wireless network planning software and consulting integrates Siradel's Volcano software technology, version 2.7, an advanced library of propagation models, in its software package CHIRplus_BC.

"Thanks to our fruitful cooperation with LS telcom, Siradel can provide all the advantages of the Volcano technology inside CHIRplus_BC, among the best planning tools for radio network design", said Laurent Bouillot, CEO of Siradel.

"We are very pleased to complement our software CHIRplus_BC with Siradel's Volcano, a very accurate and widely recognised market standard propagation model", said Dr. Manfred Leberz, Member of the Board at LS telcom.

Through the agreement both companies will benefit from an extended product offering and a greater market reach.

Meet Siradel and LS telcom at Communic Asia:

Siradel - Hall 3 France Pavilion Booth 3E3-07

LS telcom - Hall 5, Booth #5D2-03

Siradel corporate

SIRADEL is a world leading radio expertise company providing geographical databases, propagation models, radio expertise, measurement campaigns for planning and optimizing 3G, Wifi, WiMAX and video broadcasting networks.

SIRADEL's radio expertise solutions have been actively used worldwide by 200+ customers in 50+ countries for 13 years.

Volcano Software

Integrated in all major radio planning tools, Volcano features a range of fast and accurate propagation models, designed for coverage prediction for any wireless radio system as well as point to point analysis.

Geographical Data Bases

SIRADEL is a leading geo database producer capable of delivering any type of data covering any part of the world, whatever the required resolution and format.

SIRADEL has among the strongest production capacities for low and high resolution cartographic databases (DTM, DEM, land use, vectors and ortho-photos) based on the processing of aerial photos or satellite imagery (Landsat, Spot, Ikonos, Quickbird, Aster, ...).

LS telcom corporate

LS telcom is a leading supplier of system solutions and consulting, addressing the efficient use of radio frequency spectrum in all wireless applications. LS telcom is the only company in a position to cover the whole spectrum of radio services, by providing fully integrated spectrum management, high-end radio engineering and planning software systems, as well as competent consulting expertise based on long-time experience.

Core business of LS telcom is the provision of software systems, solutions and consulting services to users and regulators of radio frequency spectrum: these include national frequency agencies, broadcast regulatory authorities, military organisations; broadcast, satellite, mobile TV and mobile network operators, infrastructure service providers and many others.

LS telcom AG is listed on the German stock market (ISIN DE 0005754402).
